

IMAGINE A 2-MONTH-OLD BABY WITH A HOLE IN THE HEART

This is the case of baby Jayden, the first child of the young couple Mr. and Mrs. Adjarho.

Baby Jayden brought joy to the lives of his parents on the 25th of November, 2024 when he was born, beautiful and pleasant to behold, a delight to his family...

However, 35 days later, this joy and happiness became threatened when his family discovered he couldn't breathe properly, and he was rushed to the Warri Central Hospital and was placed on life support.

Since that day (the 31st of December, 2024) till now, baby Jayden has been on oxygen and feeds through his nose.

Medical examinations revealed that he has a congenital heart disease (Large VSD and a Secundum ASD), in simple terms, he has a hole in his heart.

[Doctors say that for him to survive this, he needs to undergo a surgical operation costing 8.5 million naira.](#)

His parents, who are a young couple just starting their lives, cannot afford this procedure, and are already financially drained having spent well over 500,000 naira in drugs, oxygen and tests to keep baby Jayden alive.

They are appealing for help from the general public to help in any way possible to raise this money and give baby Jayden a chance at life.

If this appeal comes before you, your help no matter how little would go a long way to not only save baby Jayden's life, but save this young couple from the psychological trauma that comes with losing a child.

Please find attached all necessary medical records and reports.

HELP SAVE BABY JAYDEN 🙏
